WORKFLOW TRIGGER

Patient completes initial assessment or reaches treatment milestone requiring plan update

Visual Flow

Each node represents an automated step. Connections show how data and decisions move through the workflow.

Step-by-Step Breakdown

Detailed explanation of each automated stage in the workflow.

1

⚡ TRIGGER

Assessment completion detected

System detects completion of patient assessment form or treatment milestone in EHR. Triggers automated treatment plan generation or update process.

Epic EHR

Cerner PowerChart

2

 ACTION

Extract patient clinical data

Retrieves comprehensive patient information including substance use history, mental health assessments, medications, and previous treatment outcomes. Compiles data for analysis.

Epic EHR

Cerner PowerChart

Kipu Health

3

 DECISION

Determine treatment track eligibility

Analyzes patient data against clinical criteria to determine appropriate treatment level (outpatient, intensive outpatient, residential). Routes to specialized planning protocols based on substance type and severity.

Kipu Health

Epic EHR

4

 ACTION

Generate evidence-based treatment plan

Creates individualized treatment plan with therapy modalities, medication protocols, group sessions, and recovery milestones. Incorporates clinical guidelines and best practices for identified conditions.

TherapyNotes
