CHIROPRACTIC · CLINICAL OUTCOMES REPORTING

Treatment outcome analysis and reporting

Automatically analyzes patient treatment outcomes at specified intervals by aggregating clinical data and generates comprehensive reports for care plan optimization and practice performance tracking.

01 WORKFLOW TRIGGER

Patient completes predetermined treatment milestone or reporting period ends

BLUEPRINT OVERVIEW

What this workflow accomplishes

This workflow connects ChiroTouch, Eclipse Practice Management, SOAP Vault, ChiroPad, ClinicTracker, and Genesis Chiropractic Software so that outcome data is pulled and scored the moment a patient hits a treatment milestone or the monthly reporting cycle closes. Automation handles data aggregation, metric calculation, report assembly, and follow-up scheduling. The treating doctor of chiropractic retains authority over every clinical judgment: whether a plan of care continues, is modified, or meets discharge criteria, and what any patient actually reads.

01

OUTPUTS

Patient outcome progress reports, Practice analytics dashboard, Plan of care revision recommendations, Practitioner review alerts

02

SUCCESS MEASURES

Average pain reduction percentage, Plan of care completion rate, Functional improvement scores, Re-exam completion timeliness

03

CORE SYSTEMS

ChiroTouch, Eclipse Practice Management, SOAP Vault, ChiroPad, ClinicTracker, Genesis Chiropractic Software

HOW TO USE THIS BLUEPRINT

Practice owners: review the practice-wide analytics panel monthly and set the outcome benchmarks the decision stage scores against.

Treating doctors: verify aggregated pain and functional scores against your own SOAP notes before signing any plan change or discharge.

Implementation teams: map every field the metrics depend on, confirm PHI handling across the reporting layer, and route all clinical branches to a licensed reviewer.

THE WORKFLOW

End-to-end stage map

Seven stages carry a patient from milestone detection through delivered outcome reports. The single decision point at stage four governs whether the current plan of care continues, gets revised, or moves to discharge, and no route runs without a doctor's signature.

IMPLEMENTATION DETAIL

Stage-by-stage breakdown

Each stage states the operational intent, the human control point, and the systems likely to take part. System names are examples, not a required architecture.

01 TRIGGER

Treatment milestone reached

System detects when a patient has completed a treatment phase, reached a specific visit count, or when monthly reporting cycle triggers analysis.

CONTROL POINT

The front desk lead confirms the visit count in ChiroTouch is accurate and can suppress a trigger for a patient on a documented care hold.

SYSTEMS ChiroTouch Eclipse Practice Management

02 ACTION

Aggregate patient data

Collects all relevant patient information including SOAP notes, pain scores, functional assessments, and treatment protocols from the practice management system.

CONTROL POINT

Treating doctor verifies that unsigned or amended SOAP notes in SOAP Vault or ChiroPad are finalized before the pull is accepted.

SYSTEMS ChiroTouch SOAP Vault ChiroPad

03 ACTION

Calculate outcome metrics

Processes collected data to compute key metrics like pain reduction percentage, functional improvement scores, treatment compliance rates, and recovery timeline progression.

CONTROL POINT

Clinical director spot-checks calculated metrics against source exam findings and flags any patient whose scoring looks distorted by missing visits.

SYSTEMS ClinicTracker Eclipse Practice Management

04 DECISION

Evaluate treatment effectiveness

Analyzes whether patient outcomes meet established benchmarks and determines if current treatment plan should continue, be modified, or if discharge criteria are met.

CONTROL POINT

Human control: no route advances until the treating doctor of chiropractic reviews the scored case and signs the clinical determination.

SYSTEMS ClinicTracker Genesis Chiropractic Software

COMPLETION AND MEASUREMENT

Closing stages and results

The closing stages preserve the clinical reasoning behind each plan change, put re-exam appointments on the schedule, and record what was sent to whom.

05 ACTION

Generate outcome reports

Creates detailed patient progress reports and practice-wide analytics dashboards showing treatment efficacy trends and comparative outcome data.

CONTROL POINT

Treating doctor approves the patient-facing progress summary wording before it leaves draft status; the owner approves dashboard release to staff.

SYSTEMS

Genesis Chiropractic Software

Eclipse Practice Management

06 ACTION

Schedule follow-up actions

Automatically schedules patient consultations for care plan adjustments or creates alerts for practitioners to review cases requiring intervention.

CONTROL POINT

Scheduling coordinator confirms offered re-exam and consult slots against the doctor's actual availability and can reassign or hold any booking.

SYSTEMS ChiroTouch ClinicTracker

07 OUTPUT

Deliver actionable insights

Distributes outcome reports to practitioners and sends patient progress summaries while updating treatment protocols based on analysis results.

CONTROL POINT

Practice owner authorizes protocol updates in Genesis, and the treating doctor releases each patient summary; nothing sends without a named approver.

SYSTEMS ChiroTouch

Genesis Chiropractic Software

DELIVERABLES

- Patient outcome progress reports
- Practice analytics dashboard
- Plan of care revision recommendations
- Practitioner review alerts

KEY METRICS

- Average pain reduction percentage
- Plan of care completion rate
- Functional improvement scores
- Re-exam completion timeliness

IMPLEMENTATION CHECKS

- Role-based PHI access by provider
- Outcome benchmarks set by owner
- Doctor signature before plan changes
- Report distribution logged with timestamps
- Retention matches state records rules

NEXT STEP

Turn this blueprint into an implementation plan.

Map each stage to your own systems, permissions, and approval routing before selecting tools or building automation.
