

Inventory management and restocking

This workflow automatically monitors inventory levels across laundromat locations and triggers restocking orders when supplies fall below predetermined thresholds, ensuring continuous operation without manual oversight.

WORKFLOW TRIGGER

Daily inventory scan detects low supply levels at any laundromat location

Visual Flow

Each node represents an automated step. Connections show how data and decisions move through the workflow.

Step-by-Step Breakdown

Detailed explanation of each automated stage in the workflow.

1

⚡ TRIGGER

Monitor inventory levels daily

Automated inventory tracking systems scan detergent dispensers, fabric softener levels, and cleaning supplies across all locations. Real-time data is collected from connected dispensing equipment and manual input terminals.

2

 ACTION

Aggregate multi-location inventory data

System consolidates inventory readings from all laundromat locations into a centralized dashboard. Data includes current stock levels, usage rates, and projected depletion dates for each supply type.

Huebsch Command

Wash Tracker

3

 DECISION

Evaluate restocking thresholds

Algorithm compares current inventory levels against preset minimum thresholds for each location and supply type. Factors in delivery lead times and historical usage patterns to determine urgency.

Wash Tracker

4

 ACTION

Generate location-specific purchase orders

System automatically creates purchase orders for supplies that have fallen below threshold levels. Orders are optimized by location proximity and supplier delivery routes to minimize costs.

Continental Laundry Systems

Wash Tracker

5

 ACTION

Schedule delivery coordination

AI Business OS

Automated system coordinates delivery schedules with suppliers and sends notifications to location managers. Delivery windows are optimized around peak operating hours to minimize disruption.

LaundryPay

Wash Tracker

6

⌂ OUTPUT

Update inventory tracking dashboard

System updates central management dashboard with pending orders, expected delivery dates, and current stock projections. Location managers receive automated alerts about incoming deliveries and restocking schedules.

Huebsch Command

Wash Tracker

Outputs

- Automated purchase orders sent to suppliers
- Delivery schedules coordinated with location managers
- Updated inventory dashboard with real-time stock levels

Key Metrics

AI Business OS

- Inventory turnover rate
- Stockout prevention percentage
- Supply cost optimization

Tools & Integrations

- SpeedQueen Connect
- Wash Tracker
- Huebsch Command
- Continental Laundry Systems
- LaundryPay

Actionable AI implementation strategies for
AI Business OS ready to transform their
operations.
