

Preventive maintenance scheduling

Automates preventive maintenance scheduling across multiple laundromat locations by monitoring equipment usage cycles and performance data to create optimized maintenance schedules that minimize downtime.

Step-by-Step Breakdown

Detailed explanation of each automated stage in the workflow.

1

⚡ TRIGGER

Equipment usage threshold reached

SpeedQueen Connect or Huebsch Command detects that a washer or dryer has reached its scheduled maintenance cycle count or performance anomaly. System automatically flags the equipment for maintenance evaluation.

2

 ACTION

Retrieve equipment performance data

System pulls comprehensive usage statistics, error logs, and performance metrics from the equipment's connected sensors. Data includes cycle counts, temperature variations, vibration levels, and recent repair history.

SpeedQueen Connect

Huebsch Command

Continental Laundry Systems

3

 DECISION

Assess maintenance urgency level

AI analyzes performance data to determine if immediate maintenance is required or if routine preventive service can be scheduled. Critical issues trigger emergency protocols while routine maintenance follows standard scheduling.

SpeedQueen Connect

Huebsch Command

4

 ACTION

Check location staffing availability

System accesses staff schedules and technician availability across multiple locations to optimize maintenance timing. Considers peak usage hours and location-specific operational requirements.

Wash Tracker

5

 ACTION

Generate maintenance work order

Creates detailed work order with equipment specifications, required parts list, and estimated service time. Automatically assigns to appropriate technician based on location and expertise level.

Continental Laundry Systems

Dexter Connect

6

 ACTION

Schedule and notify stakeholders

Books maintenance appointment in optimal time slot and sends notifications to location managers, technicians, and corporate operations. Updates equipment status to prevent customer usage during service window.

Wash Tracker

LaundryPay

7

 OUT PUT

Confirm maintenance appointment scheduled

System confirms maintenance appointment is booked with all stakeholders notified and equipment temporarily disabled for service. Provides estimated completion time and backup equipment recommendations if needed.

LaundryPay

AI Business OS

Outputs

- Scheduled maintenance appointment
- Technician work order with parts list
- Stakeholder notifications sent
- Equipment temporarily disabled for service

Key Metrics

- Equipment downtime reduction percentage
- Maintenance scheduling efficiency
- Preventive vs reactive maintenance ratio

Tools & Integrations

- SpeedQueen Connect
- Huebsch Command
- Continental Laundry Systems
- Dexter Connect
- Wash Tracker
- LaundryPay
