WORKFLOW TRIGGER

Customer initiates payment for parking session via mobile app or payment terminal

Visual Flow

Each node represents an automated step. Connections show how data and decisions move through the workflow.

Step-by-Step Breakdown

Detailed explanation of each automated stage in the workflow.

1

⚡ TRIGGER

Payment Transaction Initiated

Customer begins payment process through ParkMobile app or SKIDATA terminal for their parking session. System captures transaction details

including amount, parking duration, and payment method.

AI Business OS

ParkMobile

SKIDATA

2

 ACTION

Validate Payment Information

System verifies payment method, checks for sufficient funds, and validates parking session details against current rates. Anti-fraud checks are performed on the transaction.

ParkSmart

T2 Systems

3

 DECISION

Payment Authorization Check

Determines if payment is approved by payment processor or if transaction fails due to insufficient funds, expired cards, or other issues. Routes to appropriate next step based on authorization result.

T2 Systems

4

 ACTION

Process Successful Payment

Completes approved payment transaction, updates parking session status, and generates digital receipt. Customer receives confirmation and parking validation.

FlashParking

ParkMobile

5

 ACTION

Update Revenue Records

Transaction data is logged in financial system with proper categorization, tax calculations, and accounting codes. Revenue is allocated to appropriate cost centers or locations.
