## Step-by-Step Breakdown

Detailed explanation of each automated stage in the workflow.

1

⚡ TRIGGER

Detect New Tenant Registration

Property management system triggers when a new tenant completes rental agreement and first payment. Workflow initiates gate access provisioning process.

SiteLink

StorEDGE

2

 ACTION

## Generate Unique Access Code

System creates a unique gate access code for the new tenant and links it to their unit number and lease duration. Code is stored in access control database.

6Storage

QuikStor

3

 ACTION

## Send Code via SMS/Email

Automated message containing gate access code, facility hours, and security guidelines is sent to tenant's preferred contact method. Delivery confirmation is tracked.

StorEDGE

4

 DECISION

## Monitor Gate Access Attempts

System continuously monitors gate access logs for unusual patterns, multiple failed attempts, or access outside authorized hours. Decision point determines if security alert is needed.

6Storage

DomainStor

5

### Process Security Alerts

When suspicious activity is detected, system immediately notifies facility manager via SMS/email and logs incident details. Video surveillance may be triggered if available.

Syrasoft

DomainStor

6

 ACTION

### Update Access Permissions

System automatically deactivates codes for expired leases, late payments, or security violations. Tenant notification is sent when access is modified or revoked.

6Storage

7

 OUTPUT

### Generate Security Report

Daily security summary report is created showing all access events, failed attempts, and active/inactive codes. Report is delivered to facility management dashboard.

Syrasoft

## Outputs

- Unique gate access codes for each tenant
- Real-time security alerts and incident logs
- Daily access control and security reports

## Key Metrics

- Gate access success rate
- Security incident response time
- Unauthorized access attempts prevented
