Step-by-Step Breakdown

Detailed explanation of each automated stage in the workflow.

1

⚡ TRIGGER

New resident admission completed

A new resident's admission process is finalized in the facility system. This triggers the automated care plan development workflow.

3

⚙️ ACTION

Generate initial care plan

AI analyzes the resident's needs and generates a comprehensive care plan including daily activities, medication schedules, therapy requirements, and safety protocols. Care team is assigned based on resident acuity level.

4

📊 DECISION

Evaluate care plan complexity

System determines if the resident requires standard monitoring or enhanced tracking based on medical complexity and cognitive status. High-risk residents get additional monitoring protocols.

5

⚙️ ACTION

Monitor daily care execution

System tracks medication administration, vital signs, incident reports, and staff care notes against the established care plan. Automated alerts flag deviations or missed care tasks.

6

 ACTION

Analyze care plan effectiveness

Weekly analysis of resident outcomes, family satisfaction scores, and clinical indicators determines if care plan adjustments are needed. System recommends modifications based on trending data.
