WORKFLOW TRIGGER

Veterinarian approves a prescription in the practice management system during or after a patient appointment.

Visual Flow

Each node represents an automated step. Connections show how data and decisions move through the workflow.

Step-by-Step Breakdown

Detailed explanation of each automated stage in the workflow.

1

⚡ TRIGGER

Prescription approved in system

Veterinarian electronically approves a prescription for a patient in the clinic's practice management system. The system captures prescription

2

 DECISION

Check medication inventory availability

System automatically checks current in-house pharmacy inventory levels against the prescribed medication and dosage. Determines if medication is available or needs to be ordered.

Cornerstone

AVImark

3

 ACTION

Generate prescription labels and instructions

Creates pharmacy labels with patient details, medication information, dosage instructions, and veterinarian information. Generates client instruction sheets with administration guidelines.

Cornerstone

eVetPractice

4

 ACTION

Update inventory and billing

Automatically decrements medication inventory counts and adds prescription charges to the patient's billing account. Creates inventory reorder alerts when stock levels are low.

AVImark

5

 ACTION

Send client notification

AI Business OS

Automatically sends SMS or email notification to pet owner that prescription is ready for pickup or being prepared for shipment. Includes pickup instructions and medication care guidelines.

PetDesk

Shepherd

6

🕒 OUTPUT

Complete prescription fulfillment record

Creates comprehensive prescription fulfillment record in patient file with dispensing details, client communication logs, and inventory transactions. Generates compliance documentation for regulatory requirements.
